NARRATIVE

I. BOUNDARIES OF THE AIR QUALITY CONTROL REGION

The Metropolitan Philadelphia Interstate Air Quality Control Region was designated on December 12, 1968. The region is composed of eleven counties in three States. These political boundaries are: Bucks, Chester, Delaware, Montgomery, and Philadelphia Counties in Pennsylvania; Burlington, Camden, Gloucester, Mercer and Salem Counties in New Jersey, and New Castle County in Delaware. A map of the Region showing these counties is presented in Figure 1.

II. TYPE AND NUMBER OF FEDERAL FACILITIES

There are 98 Federal facilities in the Region that burn fuel or refuse. A listing of these facilities by State, County, and City is presented in Table I. Included in this table is a listing of the amount of fuel or refuse burned per year for each installation. Table II shows a break-down of type and amount of fuels used by each political division.

III. FEDERAL CONTRIBUTION TO AIR POLLUTION

The contribution of the Federal Government to the air pollution in this Region is presented in a series of tables. Table III lists the amount and type of pollution the installations emit in each County of the Region. Table IV lists those specific Federal facilities ("Point Sources") which emit more than 100 tons per year of any one type of pollutant and the approximate rate at which they are polluting. Table V lists the six coal fired boilers which are in violation of 42 CFR 76.4. This table also shows the number and size of the boilers, amount of coal used, and amount of particulate emitted and allowed.

IV. REMEDIAL MEASURES

The current (July 1970) status of the Federal installations in the Region with respect to the implementation of their abatement plans* is shown in Table VI. Table VII is a series of bar graphs indicating the reductions in emissions from Federal installations that would result in 1973 if all of the abatement plans listed in Table VI were completed. The reductions of the graphs depict the following general trends.

and boundaries of air quality control, type and number of federal facilities and federal contribution to air pollution, and remedial measures.

*(As prescribed in the Clean Air Act and Executive Order 11507)

1. Sulfur Oxides - Present local legislations sets an upper limit of 0.6% sulfur in fuel oils. Many installations have not been able to procure the low sulfur fuel to the present. The reductions indicated is to a large extend due to the future availability of such fuels.

2. Particulates - Reduction in particulate emissions will primarily result from conversions from coal to other fuels and/or the construction of higher efficiency particle collection devices.

3. Hydrocarbons and Nitrogen Oxides - Presently planned abatement measures will not significantly reduce these two pollutants. They may in fact, increase if there is significant growth in the number or size of installations.

4. Carbon Monoxide - A general reduction in carbon monoxide emissions from stationary Federal facilities will occur in the next three years. This lessening will be due primarily to improved incineration techniques and the control of emissions from open oil burning at the Navy's fire fighting school.

TABLE VI

ABATEMENT PROGRAM FOR FEDERAL FACILITIES

IN THE

METROPOLITAN PHILADELPHIA INTERSTATE

AIR QUALITY CONTROL REGION

LEGEND:

A. Statement of problem
B. Abatement measures proposed in the five year plan*
C. Abatement measures accomplished or in progress (blank indicates no progress as of July 1970)
D. Abatement measures needed but not reported in the plan

NOTE:

Local legislation forbids the use of residual fuel oil with a sulfur content greater than 0.6%. Although some Federal installations have met this requirement, most have been forced by a short supply of the low sulfur fuels to use 1.0% sulfur content residual oil. This situation will be rectified as soon as legal fuel oil becomes available.

DELAWARE

NEW CASTLE COUNTY

FOLSOM

Navy and Marine Reserve Training Center

1.A. Incinerator burning classified (paper) wastes
B. Install macerator and contract haul refuse in FY 72
C.

WILMINGTON

Veterans Administration Hospital

1.A. Incinerator burning 4,730 pounds refuse per day
B. Structurally modify and add scrubber in order to conform to 42 CFR 76.8 in FY 71
C.

* 1968 - 1973 plan per Executive Order 11507

NEW JERSEY

BURLINGTON COUNTY

BURLINGTON

Burlington Army Ammunition Plant

1.A. High sulfur content fuel oil
B. Obtain low sulfur fuel oil as soon as possible
C.

Fort Dix

1.A. Two coal fired boilers in building 4259 (the old base hospital)
B. Originally the Army wanted to cease operating these boilers and supply heat to the hospital via a connecting steam line from a distant oil fired boiler plant. This was found not practical. A study is now in progress on the costs and feasibility of replacing or converting the present plant to use oil.
C.

2.A. Three coal fired boilers in building 4102 (base laundry)
B. These boilers are to be replaced in FY 72. An interim measure to reduce the smoke emitted from this unit's stacks is a proposed over fire air port modification to be completed by October 1970
3.A. High sulfur content of fuel oils
B. See note above
C.
4.A. Pathological waste incinerator burning 1000 pounds per day type 4 waste
B. Construct new incinerator to destroy the high BTU content portions of the type 4 waste mixture allowing the pathological waste incinerator to burn the material for which it was designed.

WRIGHTSTOWN

McGuire Air Force Base

1.A. One coal fired heating plant in building 34-02
B. Convert to #4 fuel oil in FY 1969
C. Project completed
2.A. Coal fired central heating plant (building 2101)

MERCER COUNTY

TRENTON

Navy Propulsion Test Center

1.A. High volume, high heat exhausts from turbine test stands
B. Addition of scrubbers to test stands as soon as developed - estimated in 1974

PENNSYLVANIA

BUCKS COUNTY

JOHNSVILLE

Naval Air Development Center

1.A. Fire fighting school that burns oil in the open
B. Provide a smokeless open fire as being developed by the Navy Training Device Center in Orlando, Florida. Construction to begin in FY 72
C.
2.A. Pathological incinerator burning 50 pounds per day
B. Install a wet scrubber in FY 73
C.
3.A. Classified waste incinerator burning approximately 200 pounds of paper per day
B. Install wet scrubber in FY 73

CHESTER COUNTY

COATESVILLE

Veterans Administration Hospital

1.A. Incinerator burning 700 pounds per day of mixed trash and pathological waste
B. Install flue gas washer to meet Veterans Administration incinerator emission regulations in FY 71
C.

PHOENIXVILLE

Valley Forge General Hospital

1.A. Incinerator burning ten tons per day of mixed trash, pathological, and classified wastes
B. By October 1970 an outside contractor will be paid to haul approximately 70% of the refuse away - leaving the pathological and classified wastes to be incinerated in the present unit. The Army Environmental Health Services will conduct a study in 1971 of the refuse disposal problems and determine the best replacement incinerator for this installation. The present incinerator will be replaced by this new unit in FY 73
C.

PENNSYLVANIA (Continued)

PHILADELPHIA COUNTY

PHILADELPHIA

Navy Damage Control Center (in Navy Shipyard

1.A. Open burning of oil and gasoline in firefighting school
B. Build an enclosed structure with ducted after burners in FY 70
C.

Naval Ships Engineering Center (in Navy Yard)

1.A. Boilers, simulating shipboard plants, burn low grade, high sulfur fuel oil to mirror conditions and fuels available at sea
B. Install system to remove sulfur oxides from stack gases in FY 73
C. An interim measure of cutting the high sulfur oil with lower sulfur oil is in effect. Sulfur contents that were previously at a high of 3.5 to 5.8% sulfur are now approximately 2%

Navy Supply Depot (in Navy Yard)

1.A. Coal fired heating plant
B. Convert to residual oil with natural gas standby in FY 69
C. Conversion completed. (note fuel use in Table I is estimate based on BTU value of coal used previously)

Navy Hospital

1.A. One general refuse incinerator
B. Incinerator is presently inactive, refuse is being burned at the Navy Yard's incinerator. Use of this unit will resume when particulate collection device is added in FY 72
C.
2.A. Pathogenic incinerator
B. Plans are to abandon use of this incinerator and ship refuse to municipal incinerator at an unspecified date.
C.

PENNSYLVANIA (Continued)

MONTGOMERY COUNTY

NORRISTOWN

U. S. Army Reserve Center

1.A. Coal fired boiler plant
B. Convert to distillate oil in FY 72

PHILADELPHIA COUNTY

PHILADELPHIA

Frankford Arsenal

1.A. Residual oil fired boiler plant
B. Convert to low sulfur content distillate oil operation in FY 72
C. This plan has been dropped due to the availability to this installation of 0.6% sulfur residual fuel oil

Marine Corps Clothing Depot

1.A. Two residual oil fired boilers
B. Convert boilers from Number 6 oil operation to natural gas with Number 6 oil standby in FY 72
C.

Navy Shipyard

1.A. One general waste incinerator
B. Either move incineration operation off the base or update the present incinerator with air-polluting devices in FY 73
C.
2.A. One classified waste (paper) incinerator
B. Obtain macerator and combine the refuse with the trash being burned in the incinerator in problem one in FY 72
3.A. Foundary operation (bronze, brass, etc.)
B. Add particulate collection system of new furnaces in FY 73
C.

PENNSYLVANIA (Continued)

PHILADELPHIA COUNTY

PHILADELPHIA

Veterans Administration Hospital

1.A. Two incinerators; one pathological and one general refuse
P. These units will be tested against 42 CFR 76.8 and/or the Veterans Administration Incineration specifications. If not in compliance, control measures will be taken
C.

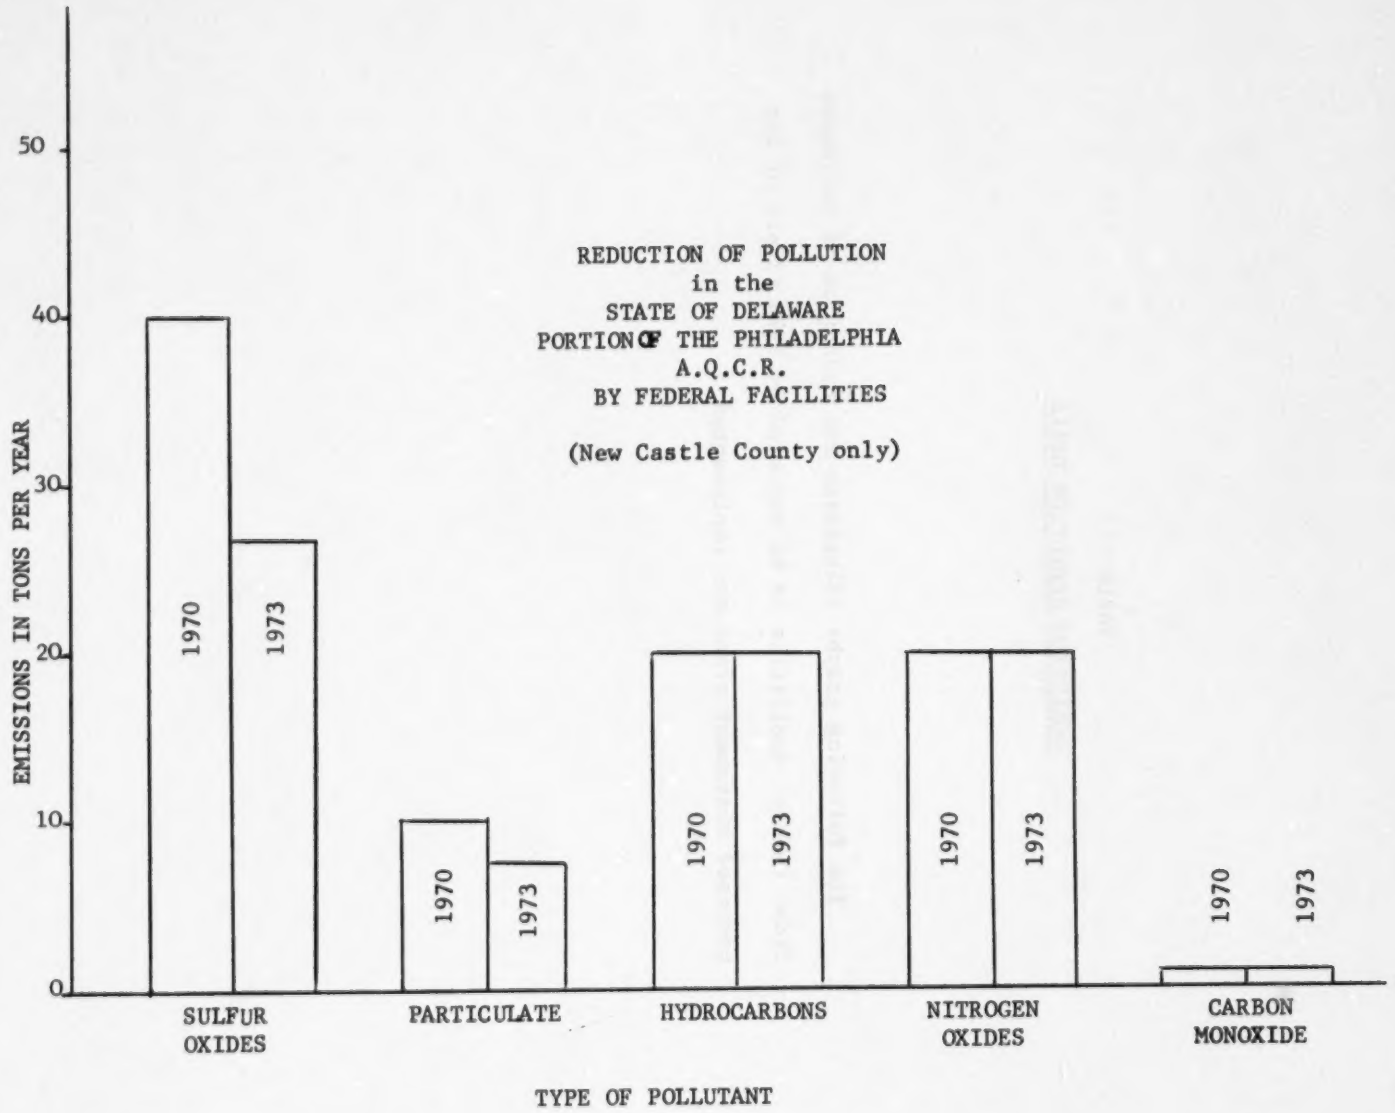
Public Health Service Outpatient Clinic

1.A. Single chambered incinerator
B. Install new multiple chambered incinerator for the facility's refuse in FY 70
C.

TABLE VII

POLLUTION REDUCTION GOALS

The following graphs illustrate the reduction of pollution from Federal facilities to be expected by 1973 if all of the proposed abatement plans are implemented.



REDUCTION OF POLLUTION
in the
STATE OF DELAWARE
